Sensor Service Adapter for ProH/ProLAD/ProV

Sensor Service Adapter for ProH/ProLAD/ProV

The service adapter enables easy connection to a ProH/ProLAD/ProV sensor in a workshop or in operation. It is a useful tool for commissioning, testing, troubleshooting and/or service work. The unit connects during set up between the 16-pin connectors for field testing or directly to the sensor using the included stand-alone power supply.

The adapter has a switch for "Sensor On/Off", indications for "Power" and "Sensor Status", test/measuring terminals for analog 4-20mA, and a BNC-connector to connect to a monitor. Precimeter Tool software is included for communication with the sensor through a PC connected with a serial communication cable RS-232 with USB-adapter.
